securiQ.Wall

securiQ.Wall is an anti-spam and content filtering application within the iQ Suite of e-mail security solutions. It runs on Lotus Domino and Microsoft Exchange messaging platforms, and features a self-learning engine that identifies new forms of spam or inappropriate content automatically. The new version delivers the ability to scan encrypted e-mails, filter databases, analyze PDFs plus 70 additional format types (JPGs, MP3s, and so on), examine zipped and compressed files, and deliver detailed spam notification to administrators, recipients, and senders. It supports multiple operating systems including AIX, iSeries, Linux, Sun Solaris, and Windows. Contact vendor for pricing.
